

Q/ris 3000 Critical Test Results Notification

The Q/ris Critical Test Results Management module will be available in the 4th Qtr 2011. This is a major upgrade to our current Q/ris CTRM offering. With the Q/ris CTRM V2.0, radiologists will be able improve the identification, triage and results communication protocol to the ordering physician, as well as establish a delivery verification documentation and auditing process. Fully automated and integrated in the Q/ris 3000 dictation software, radiologists will be able to assess the severity of the diagnosis and quickly contact the ordering physician to notify of the condition.

- Embedded directly in the Q/ris 3000 dictation program for real-time ease of access.
- User defined result categorization based on urgency – red, orange, yellow
- Radiologist work space to get ordering doctor information and record communications
- Follow up work list for result tracking to ensure positive communications
- Multiple contact methods and confirmation documentation
- A positive confirmation methodology tracks this process from start to finish and logs all attempts until notification is confirmed.
- Full management reporting of process, contacts and turnaround times
- Automatic footer on the final report to show contact person, date and time.

Stop by and see us, South Bldg, Suite 5500 for a live demonstration of our complete workflow solution. Or, call and set up an appointment 800-597-6330 ext 225. Visit our new website www.medq.com for more information.
